

2025 AMC 10B Problem 1 - Solution

Review the full statement and step-by-step solution for 2025 AMC 10B Problem 1. Great practice for AMC 10, AMC 12, AIME, and other math contests

2025 AMC 10B Problem 1

Problem:

The instructions on a 350-gram bag of coffee beans say that proper brewing of a large mug of pour-over coffee requires 20 grams of coffee beans. What is the greatest number of properly brewed large mugs of coffee that can be made from the coffee beans in that bag?

Answer Choices:

- A. 16
- B. 17
- C. 18
- D. 19
- E. 20

Solution:

We have a 350-gram bag and each large mug needs 20 grams. Therefore, number of **full** mugs we can make is

$$\left\lfloor \frac{350}{20} \right\rfloor = \lfloor 17.5 \rfloor = \boxed{\text{(B) } 17}$$

We simply do the division to find the number of bags we could get if we could allocate partial bags, and drop the remainder. In this case, we could fill 17 full bags and half of the next bag, but the half bag is irrelevant here.
